What our customers say about us

“Excellent service. The two that came to fit the gates were very polite and helpful and did a first class job. The gates work perfectly and they left the place very neat and tidy.”

Mr. Borkett, Huntingdon

“I have had many comments from our friends and neighbours about our gate - all have been very complimentary. I would most certainly recommend AutoGate Services. We have been totally satisfied with all our dealings with your company.” *Mrs. Hartley, Bedford*

“Great company to deal with and a fantastic product, we are extremely happy with our gates, and the service that we received.” *Nick Lines, Tring*

“Extremely professional friendly and helpful service. Gorgeous gate!” *Sarah Lawrence, Welwyn*

“I would like to express my genuine satisfaction with the outstanding work carried out by Paul from AutoGates. Their professionalism and technical expertise during the gate automation and intercom installation were matched by their polite, respectful, and friendly manner throughout the process. They made the entire experience smooth and pleasant, delivering exactly what was promised with great attention to detail. I'm truly pleased with the result and grateful for their excellent service and attitude. I would highly recommend AutoGates to anyone seeking high quality workmanship and reliable service.

Sameer Almushcab, Pinner

“Just a note to say thank you from my wife and I. From start to finish your people have been brilliant, and we would like to say the attention to detail over the work completed was amazing. They took considerable pride in their work (even the work experience chap) and have left the place spotless.

You accommodated us with the dates and the work was done on time. So can you pass on my thanks to the chaps.”

Mr. Brown, Gamlingay

About Us

We're a very well established family owned and run business who take great pride in a job well done. All our teams, whether office-based staff or engineers on site, are conscientious and hard-working.

Together we aim to make your new installation a great experience, whilst delivering excellent customer service.

Our MD, William Baron is very much at the forefront of our ever-growing business, and with more than 20 years experience in the industry, his knowledge and guidance is still the driving force for providing our customers with a first-class product.

Working constantly to improve all aspects of what we do, William still enjoys going back to grass roots; advising customers on the best solutions for their specific requirements, being on site with our engineers, as well as keeping up-to-date on the performance of every department.

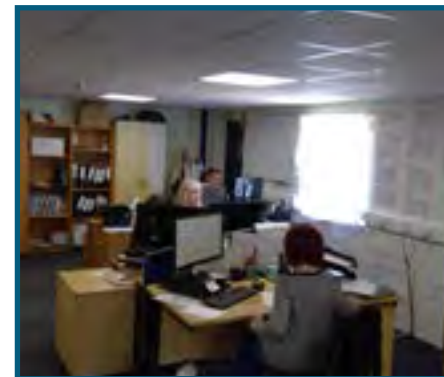

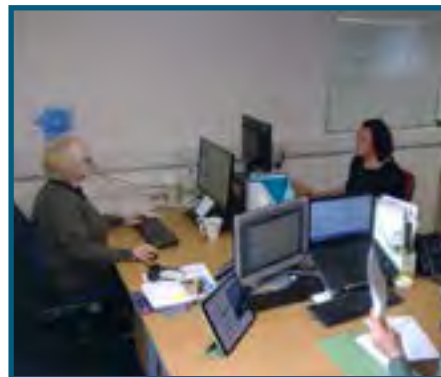

We pride ourselves on using our highly skilled workforce for all installations and servicing.

This ensures your specific project is completed to your full satisfaction by our dedicated, conscientious and polite personnel.

Our Team

All our employees regularly attend ongoing training, and with the continued support from our trusted suppliers too, you can be sure our teams are fully up-to-date with the latest product developments within our industry.

Constant improvement to their knowledge and skill set means you can trust that our engineers have a thorough knowledge of the job in hand, along with the strong desire to deliver exceptional customer service.

See the Difference for Yourself

These photographs showcase a small selection of our customers' properties, captured both before and after the installation of our bespoke crafted gates.

As you'll see, the transformation can be quite remarkable. A beautifully crafted gate can do far more than simply provide security and privacy - it can completely enhance the character and appearance of a property.

Our handmade gates are designed to complement each individual property, adding a touch of elegance, quality and timeless appeal. The result is a more polished entrance and a significant improvement to the overall kerb appeal and aesthetic of the property.

We think you'll agree that the difference speaks for itself.

Our Hardwood Gates

Our wooden gate range affords you a beautiful, natural solution for creating an impressive driveway entrance. With a chunkier appearance than metal, wood gives a striking first impression and lends well to most styles of property.

Totally unique, due to the characteristics of wood, each gate is carefully crafted at our Hertfordshire site and only once you've placed your order with us - our gates are all made bespoke to your exact sizes - ready for our skilled teams of engineers to install.

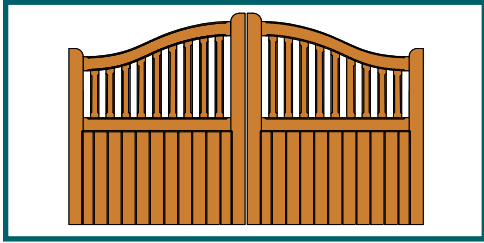

Our range of hardwood style bespoke gates:

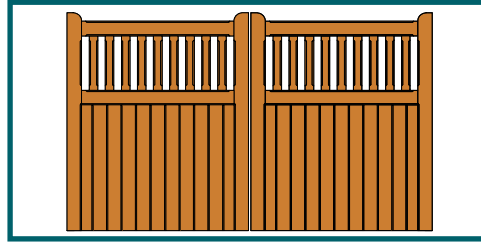

- Astwick
- Barrington
- Caxton
- Chipping
- Clavering
- Foxton
- Heydon
- Kelshall
- Kimpton
- Meldreth
- Radwell
- Therfield

Our Metal Gates

A well equipped, fully purposed workshop at our Hertfordshire site gives us complete control over the quality of what our talented metalworkers' are creating, and means you can be sure that each new project is treated with the meticulous attention to detail necessary to produce refined, elegant metal gates that we can all be proud of.

Whether fashioned to one of our ever popular, timeless designs, or based on a picture you've seen, our beautiful metal gates will enhance your property, proving to be an attractive security feature.

Our Morden Gates

Handcrafted using a combination of a heavy metal frame (lending weight to the structure) and either hardwood, aluminium or composite infill, our Morden gate range is a very popular choice for creating a modern, contemporary look at any driveway entrance.

With the powder coated finish of the metal frame being available in many standard RAL colours, and the aluminium or composite infill in selected colours - as well as the ever popular black - this gate style can be made to complement your coloured natural stone cladding, window frames or front and garage doors, giving you a completely cohesive exterior design.

Barriers

Generally used at commercial premises, schools and colleges for access control, rising barriers can also be used to combat unauthorised parking at residential developments and various other situations.

Low in maintenance and offering long term reliability, rising barriers could be the answer to your problems.

Available in different length booms to suit the width of the entrance, barriers are a cost effective measure to prevent parking spaces being taken up by commuters and shoppers, and can be operated by coded keypads, fobs, and intercoms by authorised persons only.

All of our entry and exit solutions are also compatible with our rising bollards, and work in conjunction with the relevant safety devices supplied with the installation to help prevent the bollard rising whilst a vehicle is passing over.

Rising Bollards

The perfect solution for compact driveway spaces where a gate is just not an option and prevention of your car being stolen is your objective, or for traffic management/access control, our rising bollards prove an effective deterrent to the opportunist.

Operating either electro mechanically or hydraulically, automatic bollards come as a pre-wired unit that we install directly into the ground and wire to a control panel via ducting.

School, Commercial & Farm Gates

Have you ever found anyone on your premises with no legitimate reason for being there?

A closed gate at any site entrance is a huge discouragement for the opportunist intruder, firstly preventing them from easily getting in and secondly, from making a swift exit with your valuables.

- Ensuring the safety of pupils on site is an Ofsted requirement. Securing the perimeter of the school grounds and control of access is something we can help you with.
- Site security starts with your main entrance, adding an electric gate with controlled entry and exit will help you monitor who gains access.
- Many of our farming customers report that the presence of gates have eliminated unwanted visits, so reducing theft.

Automating Existing Gates

If your existing gates are in good condition, there'll be few reasons that would prevent us from automating them.

You can trust that we'll only ever use quality motors and safety features, bought direct from manufacturers who only sell authentic parts to the trade.

Just imagine... no more getting out of your vehicle to open and close the gates in the rain, and no worrying whether the last person home closed them securely!

Underground motors

- Perfect for metal gates - do not detract from the aesthetics of the gate
- Easy maintenance
- Additional device enables gates to open beyond the standard 90 degrees

Above ground motors

- Perfect for attaching to solid close-boarded gates
- Post mounted
- Require no excavation

Sliding / cantilever gate motors

- Ideal choice of gate where space is limited
- Strong design
- More secure - not easily forced open

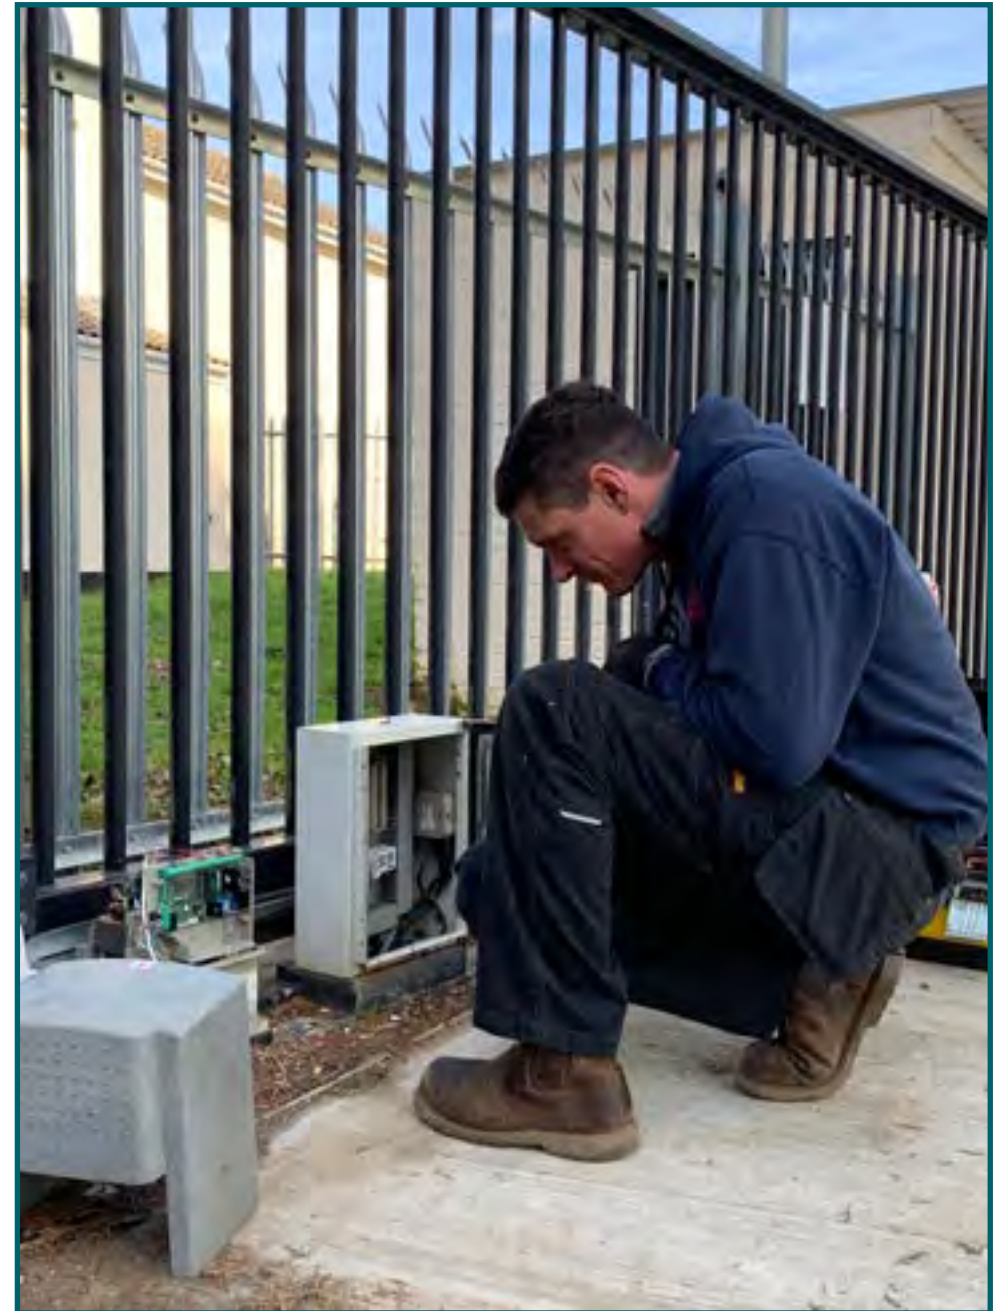

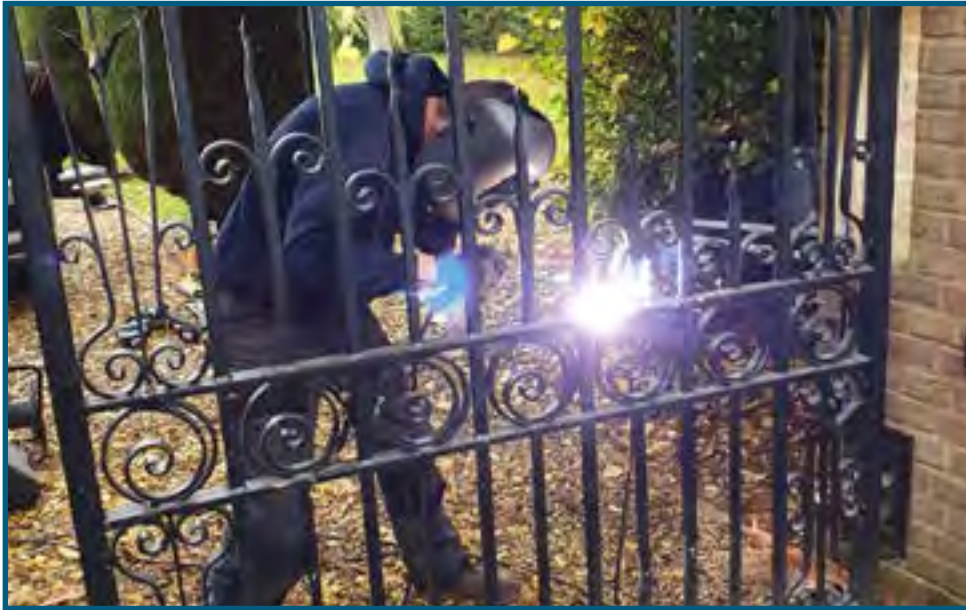

Servicing, Breakdowns & Repairs

Our care doesn't stop once your installation is completed; we offer annual, bi-annual and quarterly service agreements to cover the industry recommendations for domestic properties, company sites and schools. Having one of our engineers regularly checking your gate will ensure we can keep it up to date with the latest HSE safety standards as and when they're updated.

Unexpected problems are hassle and can be expensive! Having your gates regularly serviced means you're much less likely to require repairs, and will help you avoid unnecessary faults / breakdowns occurring. You'll prolong the working life of your gate, as well as also being kept up-to-date with the latest health and safety standards surrounding electric gates.

If your gate has failed or just isn't working quite right, give us a call - our experienced engineers are on hand to find a solution and remedy the problem.

Entry & Exit Systems

The security that comes with being able to control who comes in via your gate, along with the ability to verbally and visually confirm their identity is immeasurable. Coded keypads and push buttons also make for useful exit devices, particularly if you'd only want just one gate leaf to open partially to allow pedestrians to get out (such items can be used as a form of entry too).

Our most popular entry system is the GSM intercom. It houses a SIM card, and rather than having an internal handset installed within your property, the GSM intercom will ring your landline and / or mobile phone. This gives you flexibility to know when there is someone at the gates, even if you're not at the property!

We also offer app based, colour video intercom systems, that are hardwired directly into your router. You can choose whether you use just your mobile to control the gate, or if you wish to have an indoor screen for when you're at the property.

VIDEX GSM INTERCOM

AKUVOX E12

AKUVOX SCREEN

AKUVOX R20

For a swift and easy exit, we can install a ground loop, which acts like a metal detector. It detects when a car is approaching the gate, and will automatically send a signal to the control board to the gate to open - this way, you don't have to rummage around looking for the remote, or need to leave the vehicle!

Gate Health & Safety

As a responsible gate company, we are proud to be a full member of the DHF (Door and Hardware Federation), who are the only unified trade body for the automated gate sector. As the leading authority on gate safety - liaising with the HSE (Health and Safety Executive) - we can be sure that by following their high standard in all we do, our installations of electric gates will meet the current stringent regulations for safety, and that we are as committed as they are to raising industry standards.

To further support our determination to offer our customers the most professional of services, we are also members of CHAS (the Contractors Health and Safety Assessment Scheme), who are fully supported by the HSE to provide its members with up-to-date compliancy. This means that we look after our teams' welfare, as well as making sure our customers receive the due care and attention necessary during their installation.

Such is our confidence in our products, we offer comprehensive guarantees (provided that a service is carried out by us towards the end of the first year.) Full details are included with all of our quotations.

Get The Right Look

A major factor in choosing whether to have your new gates handcrafted completely in hardwood or metal, or even a combination of those mediums will no doubt be based on the style of your property, and the reason you need them.

Metal gate designs tend to comprise of rods, bars, circles and fleur-de-lis in various patterns. These gates create a strong, secure entrance to your driveway, allowing you to see out, and passers-by to see in. This is great if you prefer not to feel isolated from the outside world. Designs can be aesthetically elegant or more industrial in appearance.

Wooden gates appear chunkier and offer total privacy (solid fully-boarded gate design). Alternatively, you can have a half-and-half design (solid fully-boarded at the bottom, with pales in the upper half), which will provide you with some visibility from your property, and a restricted view in from passers by.

A combination of metal frame with your choice of hardwood, composite (wood grain effect) or aluminium boards is another option available.

The amount of maintenance you're prepared to do may also be something to consider. For example, are you happy to treat a hardwood gate once a year, or would you prefer practically maintenance free metal / combination gates?

Notes

This image shows a full page of white paper with horizontal blue dashed lines. The lines are evenly spaced and run across the width of the page, providing a guide for handwriting practice. There are no margins, text, or other markings on the page.
